

## Organizational Commitment

Emme-Ti, operating in the production of precision turned components, is committed to ensuring high standards of quality, safety, and environmental sustainability.

The company adopts an approach based on continuous improvement and ensures full compliance with all applicable regulatory requirements, particularly those relating to UNI EN ISO 9001, UNI EN ISO 14001, and legislation relating to MOCA (Materials and Articles Intended to Come into Contact with Food).

Management considers these principles an integral part of the company's strategic direction and promotes them at all organizational levels.

## Quality

The company is committed to:

- supplying products that meet customer technical, regulatory, and contractual requirements;
- ensuring precision, reliability, and repeatability of production processes;
- adopting a risk-based approach to identify and manage risks and opportunities;
- ensuring personnel competence through continuous training;
- continuously monitoring customer satisfaction and implementing improvement actions;
- maintaining a documented, effective, and up-to-date management system.

The objective is to strengthen customer trust through consistent performance and reliable service.

## Environment

Aware of the environmental impact of turning operations, the company is committed to:

- protecting the environment by preventing pollution and reducing significant environmental impacts;
- ensuring proper management of waste, particularly emulsions and oils;
- optimizing the use of natural resources, especially energy and water;
- adopting modern, energy-efficient technologies and lower-impact processes whenever feasible;
- complying with all applicable environmental legal requirements and other obligations;
- raising awareness among suppliers, especially those with higher impact, regarding environmental responsibility;
- periodically monitoring environmental performance and defining improvement objectives.

Environmental protection is considered a core value and a commitment to future generations.

## MOCA – Materials and Articles Intended to Come into Contact with Food

For components intended for direct or indirect contact with food, the company ensures that:

- the requirements of Regulation (EC) No. 1935/2004 and applicable MOCA legislation are met;
- suitable, traceable materials compliant with customer technical specifications are used;
- production processes are controlled to prevent contamination;
- appropriate hygienic conditions are maintained during relevant process stages;
- MOCA declarations of conformity are prepared and retained;
- personnel involved in MOCA production activities receive adequate training.

The objective is to ensure product safety and protect the final consumer.

### **Continuous Improvement**

Management promotes a system focused on the continuous improvement of quality, environmental, and MOCA performance through:

- periodic analysis of processes and results;
- definition of measurable objectives consistent with this policy;
- investment in technologies, equipment, and skills;
- active involvement of personnel at all levels.

### **Communication and Disclosure**

This policy is:

- communicated to all personnel;
- made available to relevant interested parties;
- periodically reviewed to ensure its continued suitability and effectiveness.
